a Stable Target-pair similarity among institution cities

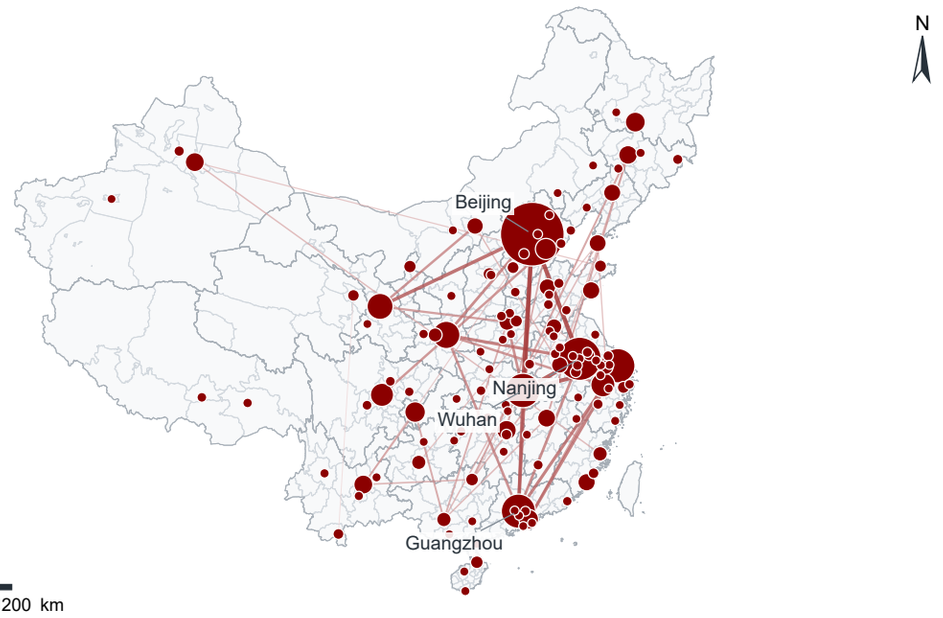

a United States · NSF

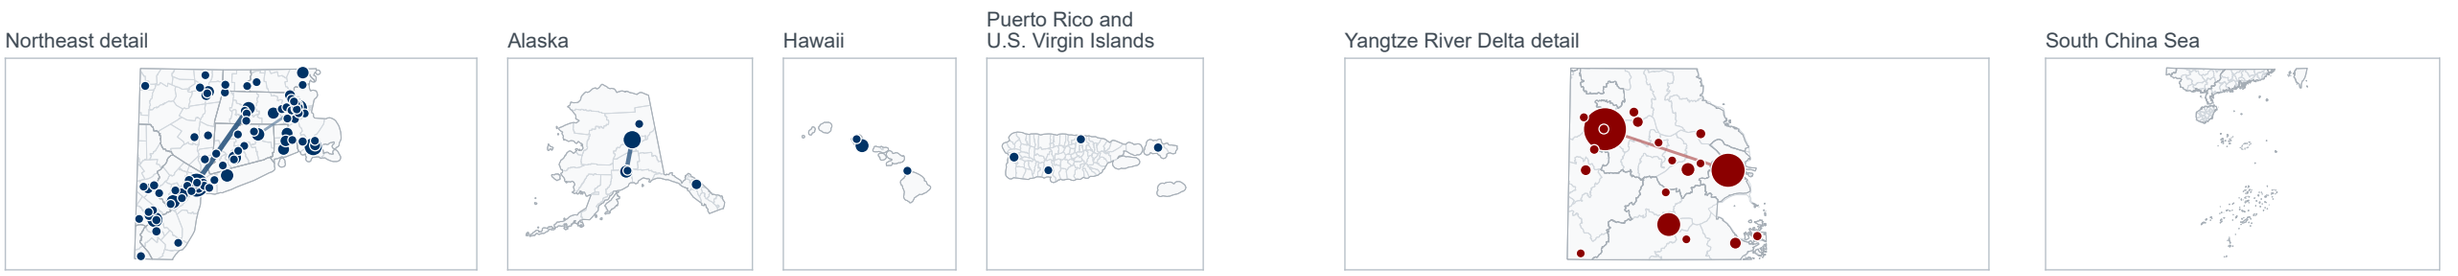

525 institution cities · 130 links; 7 cross-inset links listed below

b China · NSFC

128 institution cities · 40 links

Node colour: country — NSF · United States; NSFC · China

Node area: project count

Edge strength — NSF / NSFC: 0.30; 0.50; 0.70

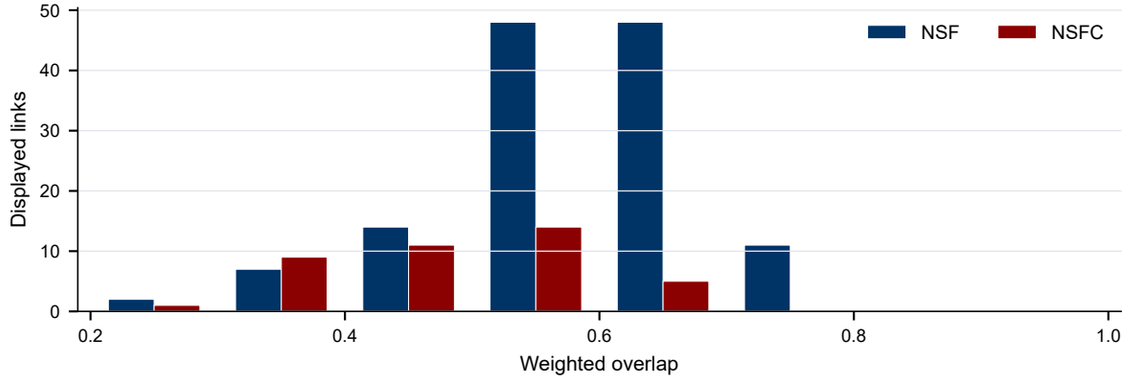

Width + shade: overlap

Seven links across relocated U.S. inset frames

Each line is a structural similarity, shown once here rather than as a geographic arc.

Honolulu – Pullman	0.70
Anchorage – Arlington	0.67
Anchorage – Gainesville	0.63
Anchorage – Lincoln	0.62
Stanford – Honolulu	0.56
Honolulu – Columbia	0.52
Tampa – Honolulu	0.51

Distribution of displayed link strength

Links are undirected similarities of stable Target-pair composition; they do not indicate collaboration or knowledge flow. Inset locations follow Fig. 3a; geographic distance is not used in the overlap metric.
