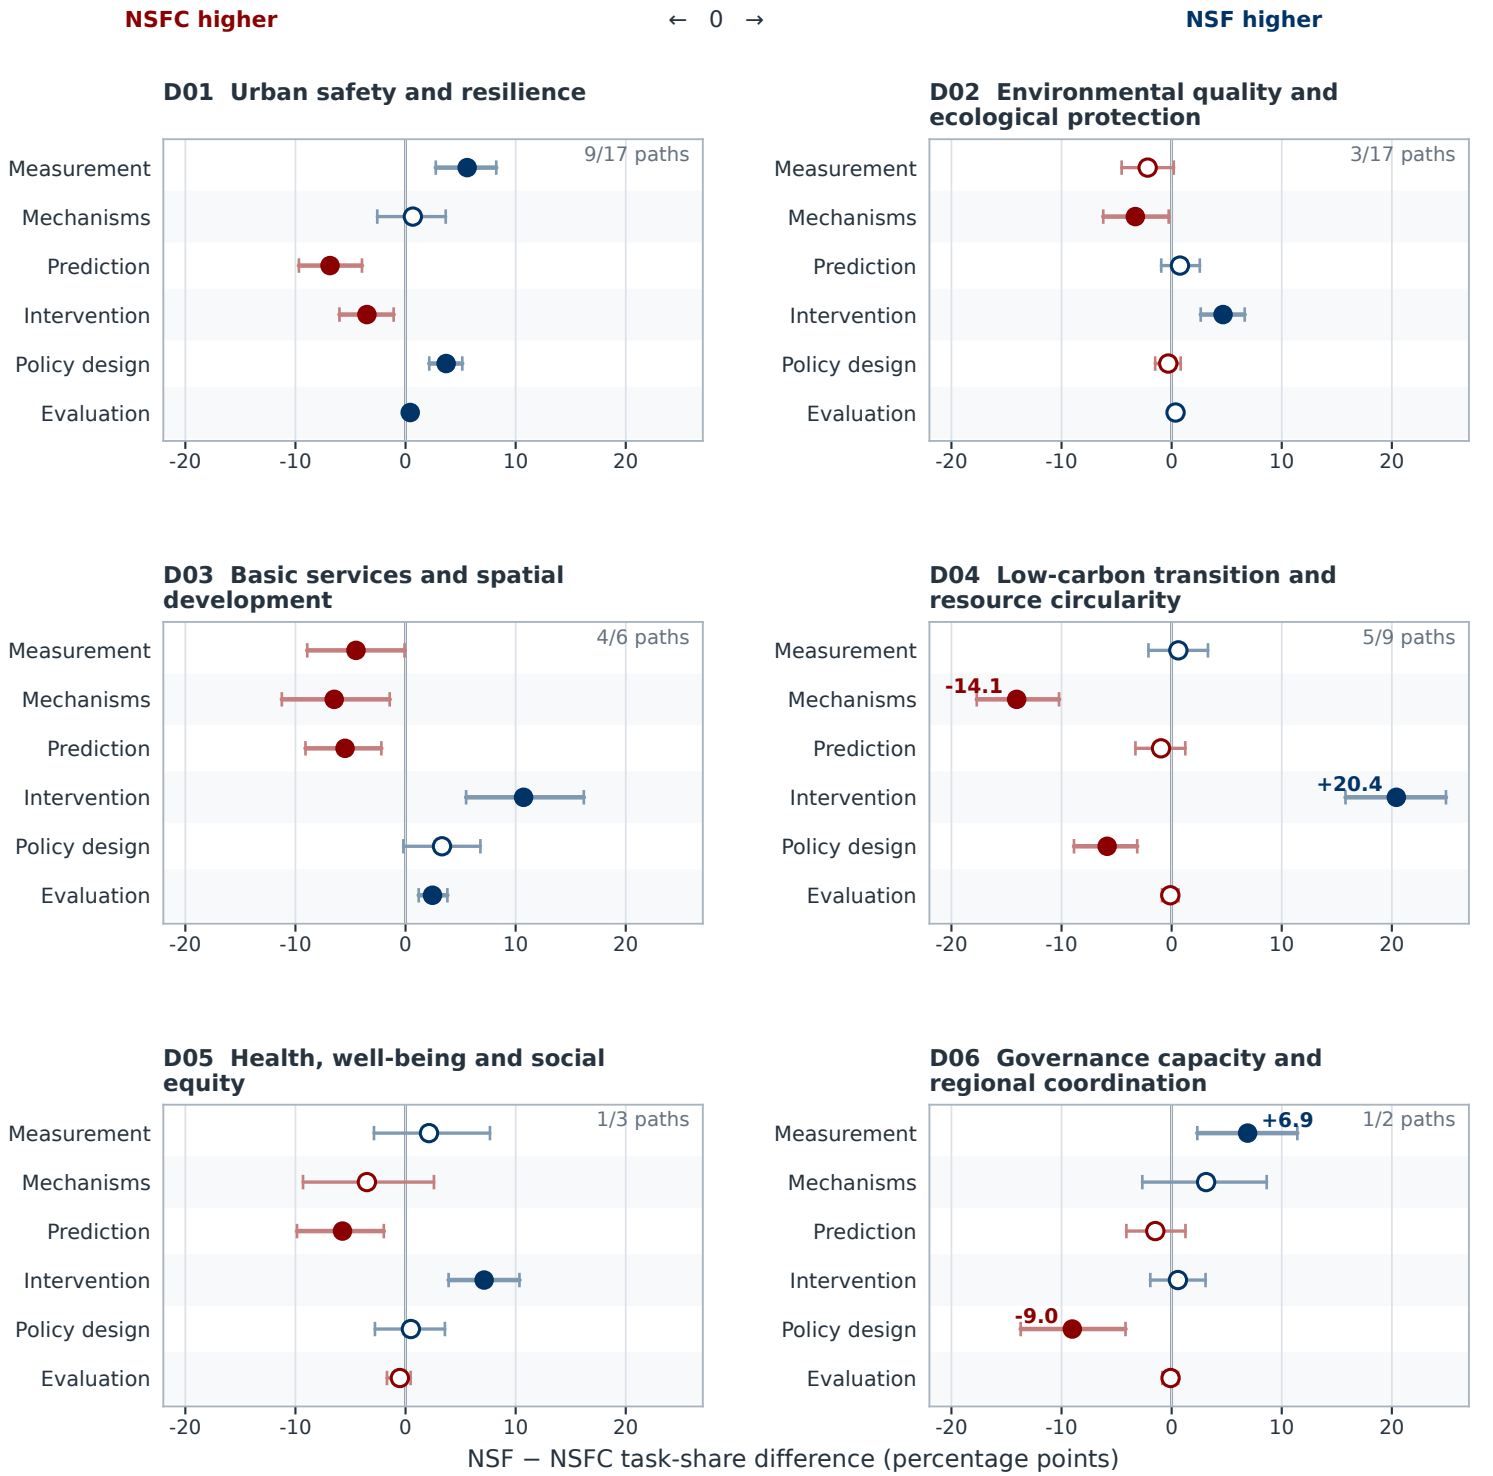
b

Domain-level differences in knowledge tasks

Six urban-need domains · 36 domain–task estimates · bootstrap 95% intervals



State measurement and problem diagnosis

Mechanism analysis and causal identification

Scenario simulation and risk prediction

Intervention design and performance optimization

Planning decision support and policy design

Implementation monitoring and impact evaluation

Domain headers report paths with ≥1 task meeting path-level CI and BH-FDR criteria / eligible paths.

All 36 domain–task intervals are shown; path counts do not test domain-level significance.
